## ABSTRACT

Recycling of metals and materials has as its purpose the easing of two major environmental crises. First, we re-utilize scarce and non-renewable resources. Second, solid waste disposal problems can be alleviated. Industry has long been concerned with reclaiming its own waste products, and is now beginning to respond to the need for dealing with municipal waste disposal problems. Cities are faced with expensive programs; dumps are ugly and unsanitary; land for dumping is in short supply. Large-scale recycling of industrial and municipal wastes is a hopeful approach both to the resource and the solid waste disposal dilemma. Since recycling is currently an important research and development area, a bibliography on this subject should be useful to special librarians in the metals and materials field. Included is a selection of research reports, articles, and books, as well as industry and government brochures on the topic. (Author)

Bibliography

- 1.0 What is Recycling?
- 2.0 Policy
- 3.0 Economics
- 4.0 Solid Waste
- 5.0 Metals -- General
- 6.0 Metals -- Ferrous
- 7.0 Metals -- Non-ferrous
- 8.0 Glass
- 9.0 Paper and Wood
- 10.0 Plastics
- 11.0 Rubber
- 12.0 Other Materials

Additional Bibliographic Sources

## INTRODUCTION

Recycling is not a new concept, but the idea of recycling in business and industry is being discovered and promoted with great vigor. Both money and materials can be saved by recycling. It challenges one's imagination to find ways of reusing instead of throwing away. In fact new and exciting products have been developed by grinding, melting, shaping metals, minerals and other materials which would have been discarded.

The theme for the Metals/Materials Division of Special Libraries Association 1972 Conference program is Recycling/Reclaiming Metals/Materials. The idea of a bibliography on the theme was suggested to Ruth Seidman and Lee Castrow. Research started on the project early in 1972. Members of the M/M Division have also made worthwhile contributions.

This bibliography was initially distributed to members of the Metals/Materials Division of the Special Libraries Association at the 63rd Annual Conference in Boston, Massachusetts. Additional copies are now available at the Region I Public Affairs Office, Room 2303, J.F.K. Building, Boston, Mass. 02203.

## PREFACE

Recycling of metals and materials has as its purpose the easing of two major environmental crises. First, we re-utilize scarce and non-renewable resources. Second, solid waste disposal problems can be alleviated.

Industry has long been concerned with reclaiming its own waste products, and is now beginning to respond to the need for dealing with municipal waste disposal problems. Cities are faced with expensive disposal programs; dumps are ugly and unsanitary; land for dumping is in short supply. Large-scale recycling of industrial and municipal wastes is a hopeful approach both to the resource and the solid waste disposal dilemma.

Since recycling is currently an important research and development area, a bibliography on this subject should be useful to special librarians in the metals and materials field. Included is a selection of research reports, articles, and books, as well as industry and government brochures on the topic.

## ACKNOWLEDGMENTS

Professor Michael Bever, Department of Metallurgy and Materials Science, Massachusetts Institute of Technology, has contributed generously to this bibliography. Dr. Bever's cooperation and interest in behalf of this project is appreciated and acknowledged.

Contributions have been received from Metals/Materials Division members as follows: W.R. Polifroni, St. Joe Minerals Corporation, Zinc Smelting Division, Monaca, Pa.; Andrew A. Sherockman, National Steel Corporation, Research Center, Weirton, W.Va.; Rosalie V. Solomon, Foote Mineral Company, Exton, Pa.; Marie Tashima, Continental Can Company, Chicago, Ill.; Neil van Allen, General Motors Technical Center, Research Laboratories, Warren, Mich.; and Marian Veath, General Electric Company, Louisville, Ky.

A computer search performed by the staff of the Solid Waste Information Retrieval System, U.S. Environmental Protection Agency, has also provided material for this bibliography.

We wish to thank all of those whose efforts contributed to this project.

- 9.13 Porteous, Dr. A., "The recovery of industrial ethanol from paper in waste," CHEMISTRY AND INDUSTRY, December 6, 1969, pp. 1763-1770
- 9.14 Strenge, R.A., "Recycling may mean trash for sale," PUBLIC WORKS, v.101:11, November 1970, pp. 81-82. Studies at Forest Products Laboratory, Madison, Wisconsin, on paper, lumber, and other wood-fiber materials.
- 9.15 Vokes, R.F., "Recovery and reuse of fiber from solid waste," in OPPORTUNITIES IN MATERIALS, 1971 (see entry 1.4), pp. 405-418. Description of solid waste processing and recycling plant in Franklin, Ohio.

## 10.0 PLASTICS

- 10.1 Banks, M.E., et al., NEW CHEMICAL CONCEPTS FOR UTILIZATION OF WASTE PLASTICS. U.S. Environmental Protection Agency, Solid Waste Management Series, SW-16c, 1971, 129 pp. GPO, \$1.25. Contains 4-page bibliography.
- 10.2 Holman, J.L., et al., PROCESSING THE PLASTICS FROM URBAN REFUSE. U.S. Bureau of Mines, Technical Progress Report-50. February 1972, 20 pp. "Experimental work on plastic waste from a community collection has guidelines for systematic methods of processing, including air classification, separation, and use or disposal."
- 10.3 PLASTICS WORLD. "Plastics and ecology: special report," v.29:6, June 1971. Feature articles on recycling. Life cycle of plastics.
- 10.4 "Reground materials are great, but...", PLASTICS WORLD, April 1972, pp. 46-47. Guidelines for use of scrap and reground plastics; areas to avoid.
- 10.5 Smith, Gene, "Power from waste disposal; plant will utilize rubbish for energy," THE NEW YORK TIMES, Sunday, March 5, 1972, Section 3, p. 2. Disposal and recycling system developed for a plastics plant.
- 10.6 Warner, Arthur J., et al., SOLID WASTE MANAGEMENT OF PLASTICS, DeBell & Richardson, Inc., December 1970. Available from: Manufacturing Chemists Association, 1825 Connecticut Avenue NW, Washington, D.C., 20009. Section on salvage and reclamation. Separate summary is available.

## 11.0 RUBBER

- 11.1 Flanagan, William, "Tires could be recycled if process proves economical," AUTOMOTIVE ENGINEERING, v.78:8, August 1970, pp. 35-38. Describes pilot plant.
- 11.2 "More mileage from old tires?", CHEMICAL ENGINEERING, v.76:23, October 20, 1969, pp. 58,60.
- 11.3 Pettigrew, Robert J., and Frank H. Roninger, RUBBER REUSE AND SOLID WASTE MANAGEMENT. Part I: SOLID WASTE MANAGEMENT IN THE FABRICATED RUBBER PRODUCTS INDUSTRY, 1968. U.S. Environmental Protection Agency, SW-22c, 120 pp., 1971. GPO \$1.25. Contains 34-page bibliography.
- 11.4 "Textiles from used tires," WASTE TRADE WORLD (London). V.11:23, December 2, 1967, pp. 3-4. Describes Hungarian Palma technique: used tires are broken down and sorted into rubber granulate and usable textile material.
- 11.5 "Used tires reused," SCIENCE NEWS, v. 94:14, December 1968, p. 598.
- 11.6 Wolfson, D.E., et al., DESTRUCTIVE DISTILLATION OF SCRAP TIRES. U.S. Bureau of Mines, Report of Investigations 7302, September 1969, 19 pp.

## 12.0 OTHER MATERIALS

- 12.1 "Air pollution control may become profitable," IOWA STATE ENGINEERING RESEARCH, v.3:1, Winter 1969, pp. 7-8. Recovery of fly-ash from power generating plants. Study being conducted to determine uses of fly ash as an engineering cement.
- 12.2 Appell, Herbert R., et al., CONVERSION OF URBAN REFUSE TO OIL. U.S. Bureau of Mines, Technical Progress Report-25, May 1970, 5 pp.
- 12.3 Bynum, Douglas, Jr., "Wasted solids (solid wastes and pavement design)," PUBLIC WORKS, v. 102: 11, pp. 56-60. A report on experiments conducted at Texas A&M on the utilization of various solid wastes as components of paving mixtures.
- 12.4 "Carbide and cobalt reclaimed cheaply and efficiently," MATERIALS RECLAMATION WEEKLY, v.116: 1, January 3, 1970, pp. 23-24. Method developed by Bureau of Mines.
- 12.5 "Fly ash collection provides raw material for ersatz cement," WATER AND POLLUTION CONTROL, v. 110:5, May 1972, pp. 57-58.

- 12.6 Kenahan, Charles B., et al., COMPOSITION AND CHARACTERISTICS OF MUNICIPAL INCINERATOR RESIDUES. U.S. Bureau of Mines, Report of Investigations 7204, 1968, 20 pp.
- 12.7 Krokosky, Edward M., "Waste in concrete," in OPPORTUNITIES IN MATERIALS, 1971 (see entry 1.4), pp. 454-465.
- 12.8 U.S. Environmental Protection Agency. Water Pollution Control Research Series 14050EPU08/71, UTILIZATION OF PHOSPHATE SLIMES. August, 1971. 128 pp. GPO, \$1.25.
